

Amendments to the Specification:

Please amend the specification as indicated below:

Paragraph 100:

[100] Furthermore, the methods disclosed herein are intended as computer implemented methods, to be carried out on computer readable medium, such as a medium stored persistently in a computer, or stored and installed from a CD-ROM, or downloaded from the Internet. Thus, it is intended that the methods disclosed above and claimed below are embodied in a computer readable medium that ~~is~~ includes thereon computer program code or a computer software product configured to cause one or more processors the carry out the methods or protocols set forth in the claims. Because the design can be modules, various means or programming modules can be included in the computer readable medium. As such, it is not strictly necessary, unless evident in the claims, that all of the means or modules are stored in a contiguous stream of bits, but can be broken up, stored, or taken from other programs associated with multiple microprocessors: what matters is that all the pieces are accessible so that the methods can be performed.
